

E20-591

Number: E20-591
Passing Score: 800
Time Limit: 120 min

Exam A**QUESTION 1**

An administrator wants to back up an EMC Celerra with Avamar using a single NDMP accelerator node. Based on EMC best practices, what is the maximum number of files that can be backed up per backup job?

- A. 5 million
- B. 10 million
- C. 15 million
- D. 20 million

Correct Answer: B

Section: (none)

QUESTION 4

You are asked to propose a serverless backup solution for the following environment:

- Oracle database running on HP-UX 11i and all datafiles reside on an EMC Symmetrix disk array.
- EMC TimeFinder/Mirror is used to create a copy of the Oracle data.
- Mirror copy of the Oracle data is backed up by a Sun Solaris 10 server.

Which EMC product would you recommend to support this environment?

- A. RecoverPoint
- B. Avamar
- C. Data Domain
- D. NetWorker

Correct Answer: C
Section: (none)

QUESTION 5

"Pass Any Exam. Any Time." - www.actualtests.com 3
EMC E20-591 Exam

An EMC customer has an EMC NetWorker server running on a Microsoft Windows host and two storage nodes running on Solaris hosts. Data Protection Advisor (DPA) will be installed on a separate Windows host. The customer requires that system performance information be collected from the backup server and all storage nodes.

A Collector will be installed on the DPA server by default. At a minimum, how many additional Collectors need to be deployed?

- A. 0
- B. 1
- C. 2
- D. 3

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 6

An EMC NetWorker customer has added the following application to their environment:

- Microsoft Exchange Server 2007 residing on an EMC CLARiiON disk array.
- A Microsoft Volume Shadow Copy Service hardware provider is used to create point-in-time copies of production data.

What is a requirement to perform serverless backups?

- A. NetWorker storage node software needs to be installed on the Exchange server
- B. NetWorker Module for Microsoft Applications needs to be installed on the proxy server
- C. NetWorker Module for Exchange and NetWorker VSS Client for Microsoft Windows
- D. NetWorker Module for Exchange needs to be installed on the NetWorker server

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 7

An EMC NetWorker customer needs to improve the RTO for all backups retained onsite. Most of the backup jobs consist of images and other scientific data. The customer requires daily tape out

"Pass Any Exam. Any Time." - www.actualtests.com 4

EMC E20-591 Exam

for long-term offsite retention. Which product addresses these challenges?

- A. EMC Disk Library
- B. NetWorker deduplication node
- C. Avamar
- D. Data Domain

Correct Answer: B

- D. Tape

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 40

A customer, using Avamar version 4, wants to use VMware Consolidated Backup (VCB) to back up their version 3.x ESX servers. Which operating system(s) can they run on their proxy server?

- A. Microsoft Windows 2003 and Red Hat Enterprise Linux 4
- B. Microsoft Windows 2003
- C. Microsoft Windows 2003 and Windows 2008
- D. Red Hat Enterprise Linux 4

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Avamar VCB Interoperability Module. The Avamar agent and the interoperability module run on the Consolidated Backup proxy server to provide the backup services. One backup server can provide backup services to many ESX server hosts, as long as all machines share the same SAN (storage area network).

With this approach, users have several advantages. By consolidating backups onto fewer proxy

"Pass Any Exam. Any Time." - www.actualtests.com 16

EMC E20-591 Exam

servers, backup can be simplified and backup licensing costs for VMware environments can be reduced. VCB reduces the load on the ESX Server during backups, eliminating the need to manage backup agents in each virtual machine. And, because of its method of transferring data using the SAN, LAN traffic associated with backup is reduced. With this approach, there is no direct application integration as is possible with guest backups using Avamar database plug-ins. Note: Backup proxy server supported on Windows 2003 server only.

QUESTION 41

A customer has an existing environment where a tape library is the target for backups. The tapes are then shipped offsite where they are stored and can be used for disaster recovery. The customer wants to eliminate the tape library and any truck delivery but still have copies sent offsite. They want to keep their backup process in place. What is the most efficient type of Data Domain replication that meets this requirement?

- A. Container
- B. Directory
- C. Pool
- D. Collection

Correct Answer: C

Explanation:

QUESTION 46

By default, which database is automatically deployed on the Data Protection Advisor server?

- A. MSDE
- B. PostgreSQL
- C. MySQL
- D. Anywhere

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

The DPA Server component is the core component of the product. The server manages all data stored within the system and provides the methods for the user to view data and to receive alerts. The Server component can run on either Solaris, Windows, or Linux. DPA can work with an embedded iAnywhere database that is automatically installed on the server during the install process, or with an external database that must be supplied and managed by the customer. DPA supports the following external databases:

- Oracle in Solaris environments
- Microsoft SQL Server in Windows environments
- Oracle and PostgreSQL in Linux environments

QUESTION 47

A company has numerous UNIX servers that are being backed up to the Data Domain system as a disk target. Which transport protocol should be configured on the Data Domain system?

- A. Fibre Channel
- B. NFS
- C. NDMP
- D. CIFS

QUESTION 59

In a Data Protection Advisor environment, what is monitored by Predictive Analysis Engine rules?

- A. Tape drive shoeshining statistics
- B. Apple MAC clients
- C. HomeBase server uptime
- D. Missed service levels

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 60

In an EMC Avamar backup, what is the role of sticky-byte factoring?

"Pass Any Exam. Any Time." - www.actualtests.com 23
EMC E20-591 Exam

- A. Determines which chunks are sent to the Avamar server
- B. Consistently creates 24 KB chunks
- C. Determines which files to chunk
- D. Consistently produces the same chunk result on unchanged data

Correct Answer: D

Section: (none)

Explanation

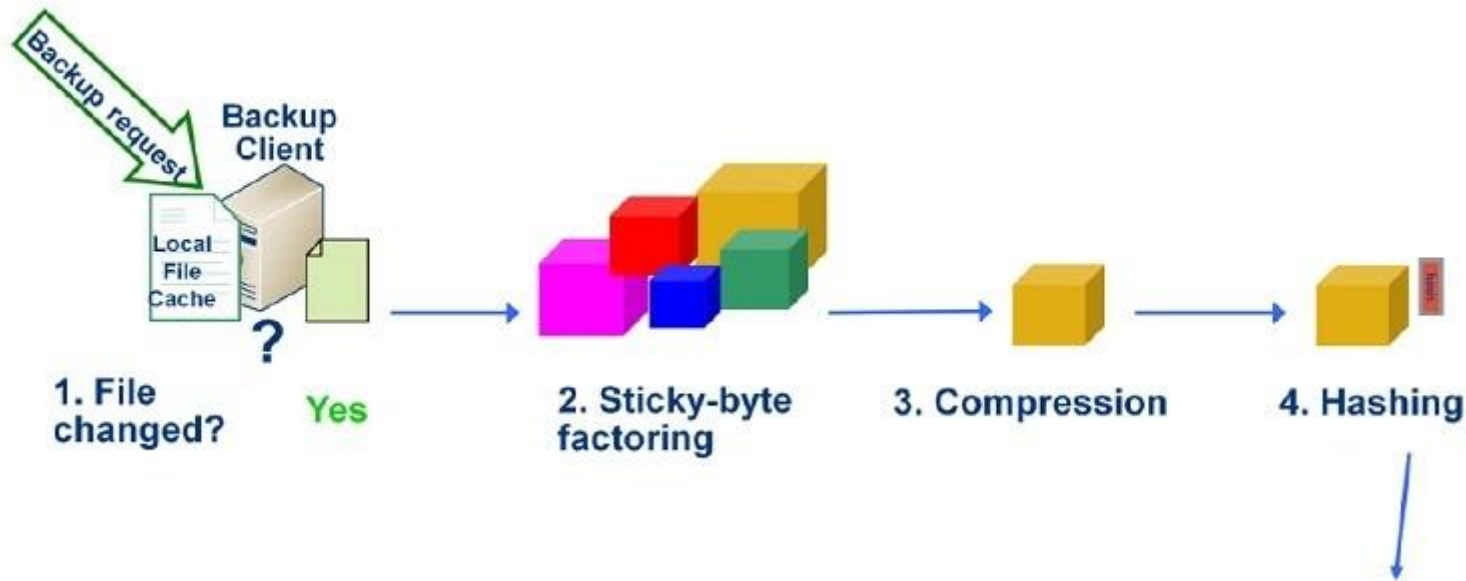

Explanation/Reference:

Explanation:

The Avamar agent running on the backup client (avtar) traverses each directory in the backup. For each file in the backup:

1. avtar checks the client's file cache to see if the file has been backed up before. Files that have been previously backed up are skipped from processing.
2. If there is no match in the file cache, sticky-byte factoring divides the file data into variable-sized chunks.
3. Each data chunk may be compressed.
4. Each compressed data chunk is hashed. The hash created from a data chunk is referred to as an atomic hash. Atomic hashes are combined to create Composites. The number of composites equals the depth of the file system being backed up.

Avamar deduplication Data Flow

QUESTION 61

A customer plans to deploy deduplication in an EMC NetWorker environment. For data backed up to the deduplication node, where is the metadata in the form of hashids sent?

- A. Storage node
- B. Client File Index
"Pass Any Exam. Any Time." - www.actualtests.com 24
